

REGENCY
INTERNATIONAL LIMITED

COMPANY PROFILE

ABOUT US

As a result of the vision of the Nigeria government to get local companies actively involved in the oil and gas industry and the desire of the country to be totally dependent on Nigerian companies to provide quality and world class services to the Nigerian oil and gas industry. Regency International Ltd is quick in recognizing the opportunities that are now available in the Nigerian oil and gas sector. Our sole desire is to provide world class solution to the oil and gas industry, this has led us to narrow our area of specialization to some specialist field where our impact will be felt in the Nigeria oil and gas sector as contributing to the overall development of the sector.

Regency International Ltd is a 100% indigenous Nigerian private company with a vision to becoming a world-class company. Incorporated and based in Nigeria, Regency International Ltd engaged in the business of Engineering, Construction, Logistics services, Procurement, Inspection, and Support Services.

Over time, we have set a track record in Engineering and Technical services, this has endeared the company in the minds of its clients in the oil and gas sector. We have made significant progress with the assistance of our technical partners as evidenced in the number of jobs handled by the company over the years. We have employed, a team of experienced professionals, the key personnel having many years of experience within particular industries. Technology transfer to the indigenous work force is our goal. In all our on-site installations and off-site modifications activities, Regency International Ltd have is wholly Nigerian shareholding. Training for our indigenous work force is a component of our structure through direct indigenous participation in all activities and 80% of these activities take place at our facilities in Nigeria.

OUR MISSION

To be the leading wholly indigenous oil and gas company providing to our clients, quality, efficient and cost effective service delivered by well trained and highly motivated Nigerians, using the latest innovations in an environmentally friendly manner to generate superior returns to our stakeholders.

OUR VISION

To be foremost indigenous company providing quality and unrival services to the Nigerian Oil and Gas Industry.

OUR VALUES

- To demonstrate integrity and honesty and to take responsibility for all our actions.
- To adopt a teamwork approach to our work and conduct our activities in a safe and environmentally responsible manner while meeting or exceeding our commitments.
- To build the company with pride for the future

QUALITY POLICY STATEMENT

It is the policy of Regency International Limited to render services of consistently high quality that meet or exceed our client's requirements and expectations at all times. Our operations shall be consistent with public good and shall comply with all applicable laws and regulations.

SERVICES

We offer a range of high quality professional services to meet the ever- increasing demands within the industry. Regency International Ltd is a force to reckon with in the field Remote Operated Vehicles, Process and pipeline management etc. In addition, we are major suppliers of materials and equipment to both the upstream and the downstream sectors of the industry. Our main services include the following:

- Pipeline and flow line maintenance and construction.
- Integrity checks on flow lines, Pipelines and vessels
- Cathodic protection works
- Facility upgrades
- Piling and platform extensions
- Waste management.
- Corrosion Control.
- Electrical & instrumentation
- Foreign and local Procurement which includes electrical, mechanical, Instrumentation & Automation, fire detection, rotating equipment and piping materials
- Logistics supports
- Manpower provision and training
- Calibration Services
- GRE/GRP Services
- Construction / Maintenance Management such as: Asset integrity Maintenance, Process facility condition monitoring, Production/Process facility operations/Maintenance, Process pipe installation /commissioning & Technical support.
- Seismic Data Acquisition
- Seismic Data Acquisition QA/QC Services
- Seabed Geophysics.
- Single beam and Multi beam Bathymetry.
- Geotechnical Engineering
- Survey, Navigation and Positioning.

1.0 Procurement, Transportation & Logistic services

Regency International Ltd is a major supplier of a range of oil field equipment and materials. The company has established strong relationships with a huge array of Original Equipment Manufacturers (OEMs) as well as buying houses worldwide. With a dedicated supply chain team, dedicated freight forwarders and clearing agents, as well as warehousing and stock holding capabilities, Regency International Ltd has become a supplier of choice to most of the major international oil companies in Nigeria.

Our in-house IT systems, experienced supply chain and logistics professionals, together with competitive credit facilities with major Nigerian and foreign banks combine to make the procurement function in Regency International Ltd world class. Be it for inventory or project related, the customer experience with Regency International Ltd in procurement is one of high quality, efficient, reliable, responsive and on-time delivery at competitive rates.

We also render the following services;

- Haulage Services of 30tons trucks.
- Delivery & sales of chippings.
- Towing Van services.

We have more than 45 of dump trucks of 30tons material carrying capacity including the ones on order. We move civil construction materials from source to sites; we move rods, sharp sand, chippings etc

2.0 Rotating Equipment

Our rotating equipment serve worldwide hydrocarbon and chemical processing, pulp and paper, power generation, and the food and beverage markets. Aftermarket services include spare parts, overhaul and repair as well as engineering and technical support.

Our Products & Services include:

High-speed centrifugal pumps

Seamless pumps

Sanitary pumps

High-speed compressors

Turbo compressors (Capacity = 6, 8, 16, 25 MW)

Packaged services

Engineering and technical support

Overhauls and repairs

Spare parts

3.0 Engineering services

PIPELINE CONSTRUCTION, INSTALLATION AND MAINTENANCE

Regency International Ltd is poised to be a high profile technology driven Oil and Gas Service Company providing unique, cost effective and safe solution to all pipeline construction, pipeline repairs or logging problems using a combination of highly experienced personnel, leading-edge instrumentation and modern equipment to execute projects on a timely basis and within budget.

The affiliation of the joint venture company to foreign technical partners provides us access to their technologies and innovativeness which has achieved a great feat in cost reduction in the area of pipeline repairs, plant maintenance and facilities turnarounds.

SCOPE OF WORK

- Pipeline integrity Software, which is a specialized software-reporting program, used to track and report pipeline flaws and repairs.
- Specialized boring, digging and trenching and equipment that quickly and safely exposes all underground transmission lines.
- General fabrication in a construction projects

In addition to pipeline construction repairs and maintenance, Regency International Ltd also offers solution to more specialized problems such as installing roads on river crossings, managing pipeline abandonment and revamping pipeline.

PIPELINE INTEGRITY ANALYSIS AND MANAGEMENT

Regency International Ltd provides high-pressure pipeline system operators and owners the specialized engineering and inspection expertise required for continued safe operation, reliability and monitoring of system integrity in accordance with regulatory guidelines.

Our pipeline integrity management support services include the following aspects:

- Development and completion of SEC detection, characterization and disposition programs.
- Managing investigative digs.
- Selecting potential SEC sites and development of long term inspection strategy.
- Soil and water chemistry characterization.
- Evaluation of coating and construction practices and Coating disbandment surveys.
- Corrosion product analysis including SRB bacterial testing.
- Condition evaluation of tape coated and asphalt enamel coated pipelines.
- Evaluation of cathodic protection systems
- On-site visual, MPE and UT shear wave scans and Complete metallurgical laboratory.

- Evaluation of pipe metal loss and cracks.
- Analysis of pipeline materials including metallographic and SEM analysis.
- Corrosion evaluation and mapping.
- Implementation of corrosion monitoring programs. Managing external coating repair programs (Rehab Work), including installation of clock springs.
- Inspection of coating application to field girth welds joints.
- Inspection of coating application to line pipes in shops.
- Inspection of sleeve application to field joints

Electrical & Instrumentation

At Regency International Ltd we undertake general refurbishment of electrical installations in production platforms and rigs.

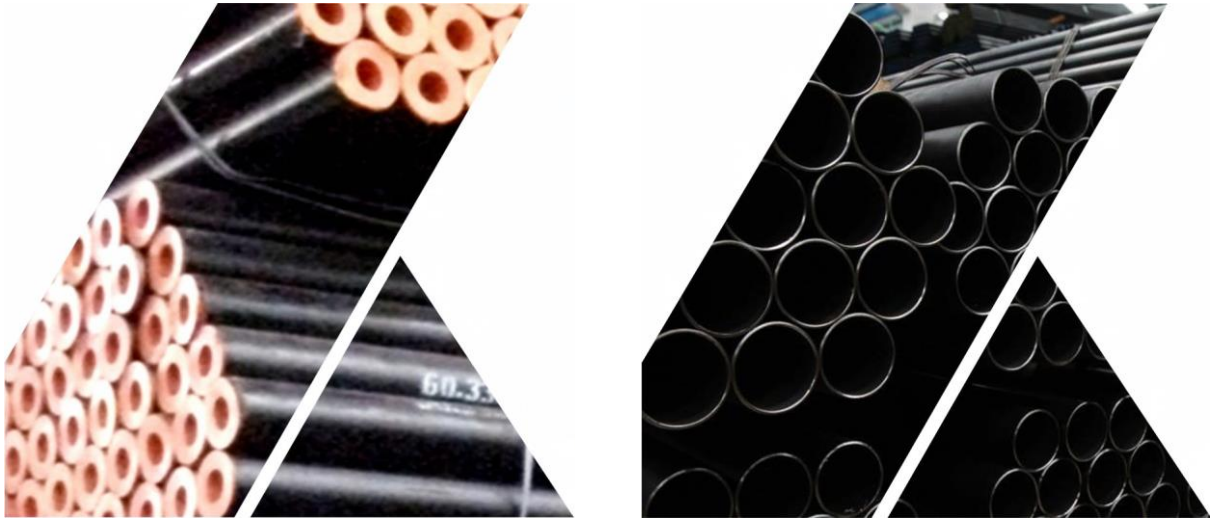

We design and fabricate electrical distribution control panel. Install and maintain of control centers and switch gears. 3- Phase induction and squirrel cage motors
Renown in lying of steel conduits and cable trays. Calibration of relays and generator solenoids.

You can count on us for the installation and maintenance of cathodic protection in underground pipe using magnesium oxide as "Sacrificial Anodes" and all other modern technologies in use.

4.0 Carbon Steel Line Pipes & OCTG

Regency International Ltd supplies line pipes ranging from 4inch up to 100inch. Regency International Ltd is in partnership with a number of internationally recognized and approved mills producing seamless pipes, OCTG and large bore welded pipes I ERW and spiral DSAW. With our team of experienced staff we are able to meet our clients' project need and on schedule.

5.0 MARINE OPERATIONS & MANAGEMENT SERVICES

Regency International Ltd currently provides the following services:

- Marine Owning of tugs and offshore vessels
- Operation and management of offshore v
- Operation and management of tugs
- Offshore Marine Operations
- Marine Logistics Management
- Ship Repairs and Equipment Overhaul

6.0 Centrifugal & Electric Pumps, Drilling & Work over Rigs

Regency International Ltd recognizes the importance of having a good media for transporting fluid or gas, and based on this information, Regency International Ltd will provide from the design to installation of Centrifugal and electric pumps and additionally Regency International Ltd is able to provide advanced solution for management of integrated water cycle.

Regency International Ltd have been constructing drilling rigs and drilling equipment for water-, oil and gas wells. Our long term experience results in high quality drill rigs. We design and manufacture drill rigs of all sizes starting from 1ton pulling capacity, helicopter transportable to the biggest, fully mobile drilling rigs 160 tons pulling capacity.

7.0 Gas Turbine Cleaning

It is well known that compressor efficiency plays a vital role in the overall operation and reliability of a plant. As compressors get dirty, even with the most sophisticated inlet air filtration systems, power output is reduced and fuel consumption increases. Even small performance losses result in a significant negative impact on plant efficiency. The maintenance of clean compressors must be an integral part in the operation of any plant. Compressor degradation is very site specific depending on location, environment and type of operational requirements, but all gas turbine compressors require cleaning at some point. Regency International Ltd in alliance with a world approved gas turbine cleaning product manufacturer can execute a cleaning program that meets the Gas turbine OEMs cleaning standard. Based on the client's immediate request we are able to carry out the following cleaning.

On-line cleaning- Also known as hot washing, this can be carried out quickly, simply and effectively whilst the turbine is working. It allows for the prolongation of the times the turbine is operational, avoiding frequent downtime and ensuring constantly high performance levels. The special composition of our cleaners ensures superior cleaning results, even in the high-temperature area at the back of the compressor.

Off-line cleaning- This method, also known as cold or crank washing, is called for when a turbine's performance falls below 94% of its potential power due to contamination and allows it to return to close to 100% nominal power

8.0 TECHNICAL MANPOWER OUTSOURCING

We offer comprehensive recruitment solutions enabling client's benefit on all aspects of the talent acquisition process across Industry verticals, Experience levels and across geographies. Acting as a link between the organization and the job seeker, we endeavor to place the right candidate in the right organization.

Geophysical Data Acquisition:

Regency International is well positioned to carry out geophysical data acquisition. The main objective of the acquisition and analysis of geological and geophysical (G&G) data is the development of maps to identify areas favorable for the accumulation of hydrocarbons. The G&G data is analyzed to develop a basic knowledge of the geologic history of an area and its effects on hydrocarbon or strategic/critical minerals generation, distribution, and accumulation within the planning area.

Seismic Data Processing:

Regency International also provides Seismic data processing which involves the compilation, organization, and conversion of wave signals into a visual map of the areas below the surface of the earth. The technique requires plotting points and eliminating interference.

Singlebeam and Multibeam Bathymetry:

As part of our services Regency International Ltd is involved in Bathymetric studies with dual-frequency and single-frequency echo sounders that allow greater precision in all types of aquatic floors. High resolution bathymetry with 100% coverage of the seafloor through multibeam echo-soundings and course correction, pitch, roll, yaw, and sound velocity.

Geotechnical Engineering:

Regency International Ltd also provides Geotechnical Engineering which explains the mechanics of soil and rock and its applications to the development. It uses the principles and methods of soil mechanics and rock mechanics for the solution of engineering problems and the design of engineering works.

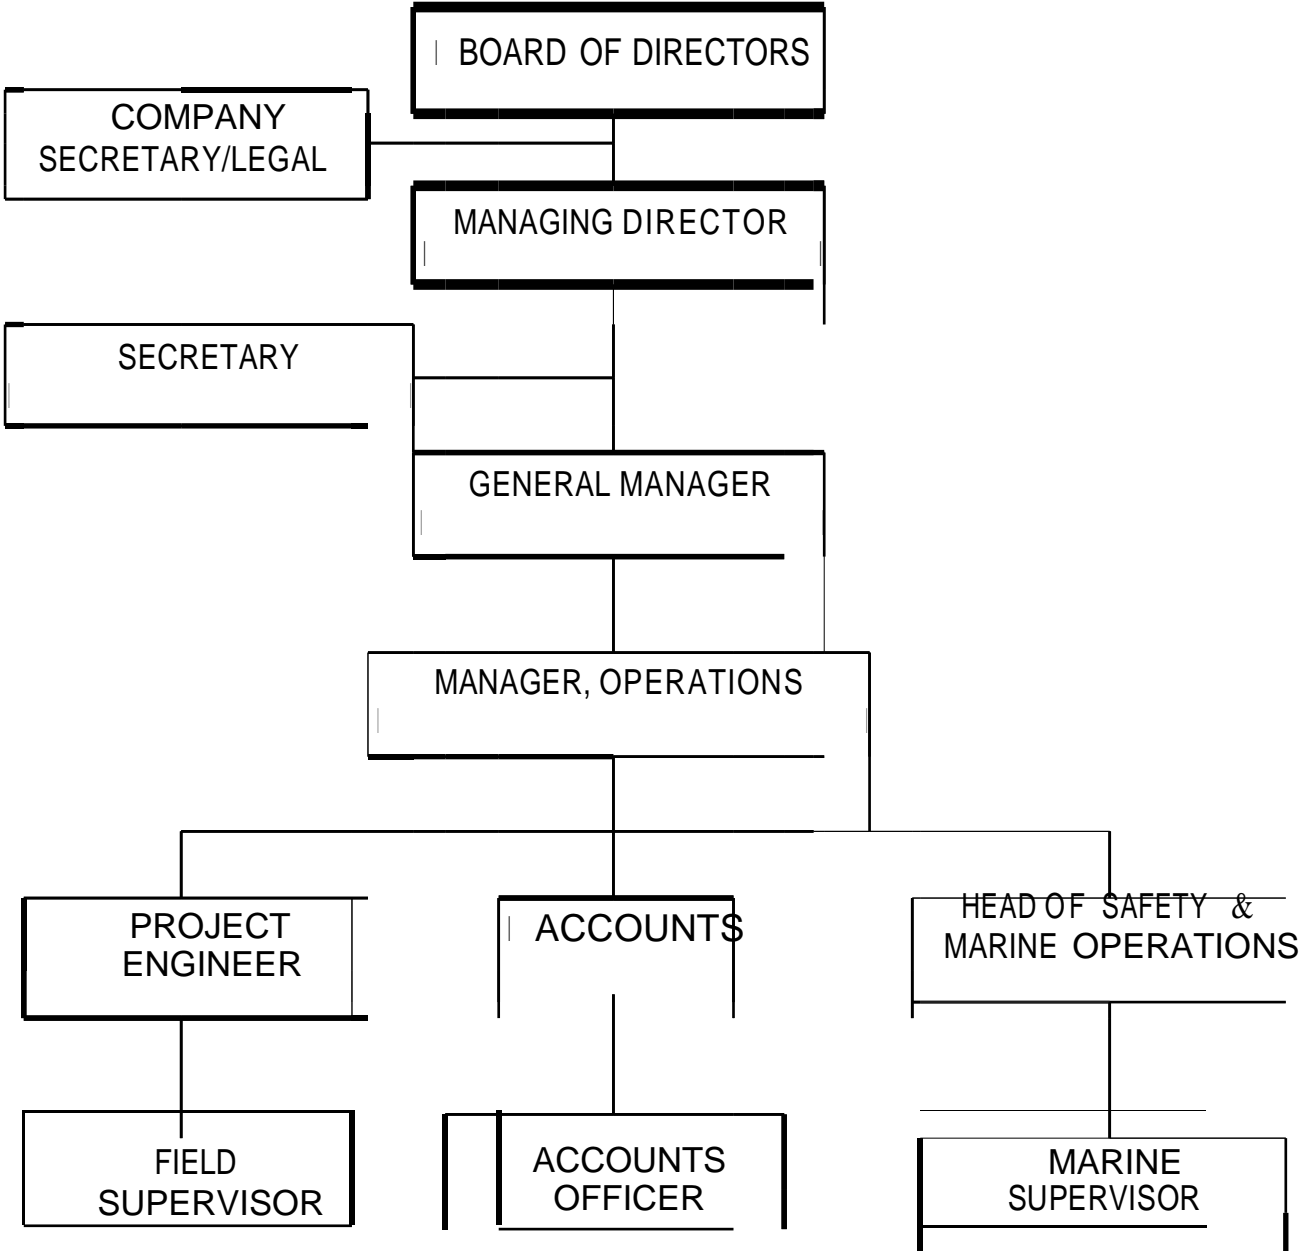

Seismic Survey, Navigation and Positioning:

Regency provides relevant software and services for data processing and quality control for seismic survey navigation data. We provide software for all types of seismic survey. Our customers benefit from up to date technology and prompt and comprehensive technical support.

Integrated Reservoir Studies:

Integrated Reservoir Studies Starting at the raw seismic data we provide the capabilities to process, interpret and utilize your exploration data for further field development. Our reservoir engineers, geologists, geo- and petro physicists are well trained professionals with decades of experience.

COMPANY CHART

SOME OF OUR PARTNERS

1. THERMON: The heat tracing specialist
2. BOGE: Compressed air systems
3. HAIGH ENGINEERING: Macerators
4. CLARK-RELIANCE CORPORATION: Electrical and Instrumentation
5. ELMESS THERMO SYSTEM TECHNIK. Electric Heater
6. FRONTMET ENERGY GROUP. Pipes, Valves & Fittings
7. TAPFLO. Pumps & Accessories.
8. EUREKA INDUSTRIAL EQUIPMENT PVT. Flow meters etc.
